A93.17/7:

IMPORTANT INFORMATION ABOUT YOUR SUBSCRIPTION

Foreign Agricultural Trade of the United States is published six times a year with two supplements. Subscription prices are $26 a year domestic and $32.50 foreign (prices subject to change). Send check or money order payable to "Superintendent of Documents" to Superintendent of Documents, U.S. Government Printing Office, Washington, DC 20402. For faster service, call (202) 783-3238 and charge your subscription to your VISA, MasterCard, Choice, or GPO Deposit Account.

IS IT TIME TO RENEW?

Your subscription to this publication may be due to expire soon. If so, you will get a renewal notice in the mail from GPO about 90 days ahead of time. Only one notice is sent. You must return it promptly to ensure uninterrupted service. If you have misplaced your renewal notice, use the form on the back of this report. Be sure to attach mailing label.

Prepared by the International Economic Indicators Branch, International Economics Division, Economic Research Service, U.S. Department of Agriculture. Principal coordinators were C. Edward Overton, Thomas A. Warden, and Thomasine B. McCall. Mary L. Fant provided statistical support. Judith Placer and Denise Morton provided word processing and table formatting support. Editorial support was provided by Linda L Hatcher, Research Information Branch, Economics Management Staff. Data processing support was provided by Sharlan Starr and William Meiller, International Economic System Branch, Data Services Center, and Penni Korb, International Economic Indicators Branch.

Digest

U.S. Agricultural Exports Drop $4.9 Billion (see p. 2). U.S. agricultural exports for October 1985-August 1986 fell 17 percent from values in the same 11 months of fiscal year (FY) 1985 to $24.4 billion. Lower prices and falling export volume caused the $4.9-billion decline. Volume fell 15 percent to 101 million tons. The agricultural trade balance was negative in May and July as the seasonal export cycle reached its low point and coincided with the adjustment period of the 1985 Food Security Act. U.S. agricultural exports in FY 1986 were their weakest since the mid-1970's, but export tonnage of some commodities accelerated in the latter months of 1986. Export volume is expected to continue rising in FY 1987.

U.S. Agricultural Imports Climb (see p. 72). Imports climbed to $19.3 billion in the 11-month period, a 7-percent gain over those of the same period in 1985. Increased U.S. consumer demand, unfavorable U.S. weather, and higher world prices for coffee and spices produced most of the increase. Import values declined slightly toward the end of the year due to sluggish trade in some major items and substantially increased U.S. crop production.

U.S. Interest Rates and Dollar Ease (see p. 118). The dollar eased against major currencies as U.S. interest rates declined in August. The Federal Reserve lowered the U.S. discount rate to bolster lagging U.S. economic growth. However, central banks in Japan and Germany did not make similar reductions and caused U.S. interest rates to slide below foreign ones and the dollar to decline slightly.

U.S. Trade Benefits Economy (see p. 122). U.S. agricultural exports generate employment, income, and purchasing power in the farm and nonfarm sectors. Each dollar received from agricultural exports in calendar year (CY) 1985 stimulated another $1.50 (or an additional $43.5 billion for the $29 billion of CY 1985 agricultural exports) in supporting activity to produce the exports. An estimated 830,000 full-time civilian jobs, including 480,000 jobs in the nonfarm sector, were related to agricultural exports.

U.S. Agricultural Exports Drop $4.9 Billion

U.S. agricultural exports for October 1985-August 1986 fell 17 percent from values in the same 11 months of fiscal year (FY) 1985 to $24.4 billion. Lower prices and falling export volume caused the $4.9-billion decline. Volume fell 15 percent to 101 million tons. The agricultural trade balance was negative in May and July as the seasonal export cycle reached its low point and coincided with the adjustment period to the 1985 Food Security Act. U.S. agricultural exports in FY 1986 were their weakest since the mid-1970's, but export tonnage of some commodities accelerated in the latter months of 1986. Export volume is expected to continue rising in FY 1987.

Export Volume Drops 15 Percent

Export volume fell 17 million tons from the October-August period in FY 1985 to 101 million tons. Feed grains, at 33 million tons, remained the largest U.S. agricultural export but also suffered the largest decline in export volume. Feed grain exports fell 19 million tons, a 36-percent drop from the same 11-month period in FY 1985. Wheat exports fell 3.7 million tons for the second largest drop in export volume. Soybean oil exports dropped 33 percent, and cotton volume fell 68 percent: together, they fell 1.1 million tons.

Shipments of most animal and horticultural products rose. Meat exports rose 2 percent, and fruit and vegetable tonnages improved. Export volume for corn gluten feed increased nearly 1 million tons; soybeans and soybean meal, 4.6 million tons; and wheat flour, 346,000 tons.

Prices Fall for Major Commodities

Export value and volume in the 11-month period of FY 1986 fell 17 and 15 percent from year-earlier levels. Lower export volume was not solely responsible for falling value, despite the parallel movement. Lower prices for major commodities helped reduce export value. Wheat, corn, and soybeans accounted for 73 percent of U.S. agricultural export volume in FY 1985, and lower prices for these commodities were a major factor in lower export value that year. Prices have continued falling in 1986. Corn's average export price, or export unit value (EUV), for the October-August period of FY 1986 dropped 14 percent from its year-earlier level. The EUV for wheat also fell 14 percent, and that for soybeans dropped 11 percent.

If these prices had not fallen, the same volume of U.S. agricultural exports in the October-August period of FY 1986 would have returned $1.5 billion more in value. In contrast with declines in bulk commodity prices, EUV's for beef, pork, live animals, and cattle hides exceeded year-earlier levels. Average EUV's for fruits and preparations rose from $685 per metric ton to $710 per metric ton, and those for vegetables and preparations climbed from $664 per metric ton to $682 per metric ton. Prices for higher unit-value and value-added exports generally have performed better than prices for bulk products and have helped offset the effects of these lower bulk export prices on U.S. agricultural value in FY 1986.

Foreign Production and Competition Cut Feed Grain Exports

U.S. feed grain exports in the October-August period of FY 1986 fell $3 billion from year-earlier levels, the largest drop stemming from decreased purchases by the USSR. Feed grain exports to the USSR dropped $1.2 billion and 8.4 million tons, as increased feed production and supplies in the USSR drastically reduced import requirements. U.S. feed grain exports to Western Europe dropped 50 percent, or 3.1 million tons, after the corn crop in France rose. U.S. corn is imported by the European Community (EC) mostly for industrial purposes instead of feeding, and U.S. corn exports to the EC also suffered as EC industrial consumers turned to alternate starch sources.

Venezuela, Mexico, Turkey, Iraq, and Sub-Saharan Africa increased their feed grain production and reduced their imports from the United States. In contrast, drought-reduced production led Brazil to import 853,000 tons more of U.S. feed grains in FY 1986, and U.S. sales to Eastern Europe rose 206,000 tons following drought in Romania and Bulgaria.

Competition reduced U.S. feed grain sales in East Asia, but reduced purchases by the USSR meant that Japan regained its position as the largest U.S. customer nonetheless. U.S. shipments to Japan fell from 12.8 million tons to 10.5 million tons, despite a slight increase in Japan's feed grain imports. Sales to Japan increased from most U.S. competitors, including China, despite flood-reduced corn production in China's export-producing northeast. After a 2-year hiatus, South Africa resumed exporting in FY 1986, cutting U.S. sales to Taiwan and Japan. U.S. feed grain sales to Taiwan fell 461,000 tons, and sales to Korea fell 281,000 tons. Korea continues to purchase significant quantities of feed wheat from Canada and Australia.

Wheat Exports Remain Lower

U.S. wheat exports in the 11-month period of FY 1986 fell $1 billion below year-earlier levels, despite stronger exports in June, July, and August. Exports grew after June 1 when lower U.S. loan rates took effect and reduced U.S. export prices. U.S. wheat prices were previously less competitive in overseas markets, leaving the United States a smaller market share. In addition, world trade slowed as buyers delayed purchases in anticipation of lower U.S. prices. U.S. export tonnage dwindled until May when monthly exports reached their lowest point in 14 years. By July, however, substantially higher wheat shipments pushed the volume of U.S. agricultural exports above July 1985 volume. July and August were the first months in 1986 that total volume outperformed the year-earlier level.

U.S. wheat exports also benefited from being the primary focus of the Export Enhancement Program (EEP). EEP initiatives resulted in higher U.S. wheat exports to the Middle East and North Africa. U.S. wheat exports to the Middle East rose 376,000 tons due to larger shipments to Turkey and Jordan, while exports to North Africa rose nearly 3 million tons. The value of U.S. agricultural exports to North Africa rose $180 million as the increase in wheat volume offset lower prices and generally lower exports of other commodities to the region. North Africa was the only region where the value of U.S. farm product exports increased in 1986.

Elsewhere, U.S. wheat sales generally fell. Brazil's domestic production more than doubled and led to a 2.5-million-ton decline in U.S. wheat exports there. Financial difficulties in Nigeria cut U.S. wheat sales to Africa's largest importer from 1.6 million tons in the October-August period of 1985 to 744,000 tons in the same period of 1986. China imported 1 million tons less of U.S. wheat, and U.S. shipments to the USSR fell from 2.9 million tons to 153,000 tons. The USSR took no U.S. wheat between December 1985 and August 1986 and failed to fulfill the terms of the U.S.-USSR Long-Term Grain Agreement for the second straight year.

U.S. Soybean and Soybean Meal Market Share Rises

U.S. soybean and soybean meal exports in the 11-month period rose over year-earlier levels. Soybean shipments reached 19.3 million tons compared with 15.8 million in the October-August period of 1985. U.S. soybean meal exports rose 26 percent, or 1.1 million tons. Soybean meal prices also increased, pushing soybean meal exports up 36 percent in value. U.S. exports increased to most major customers as lower production in Brazil reduced competition. Soybean and soybean meal exports to the EC, Japan, and Other East Asia rose in FY 1986, despite their relatively stagnant consumption. A 1.5-million-ton increase in U.S. soybean exports to the USSR also boosted exports.

Soybean oil exports fell 238,000 tons. Although export volume rose for most other vegetable oils, large palm oil stocks depressed world market prices. The average EUV for vegetable oils fell nearly $200 per metric ton, and the value of U.S. vegetable oil exports fell $283 million.

Cotton Sales Boom After Extended Decline

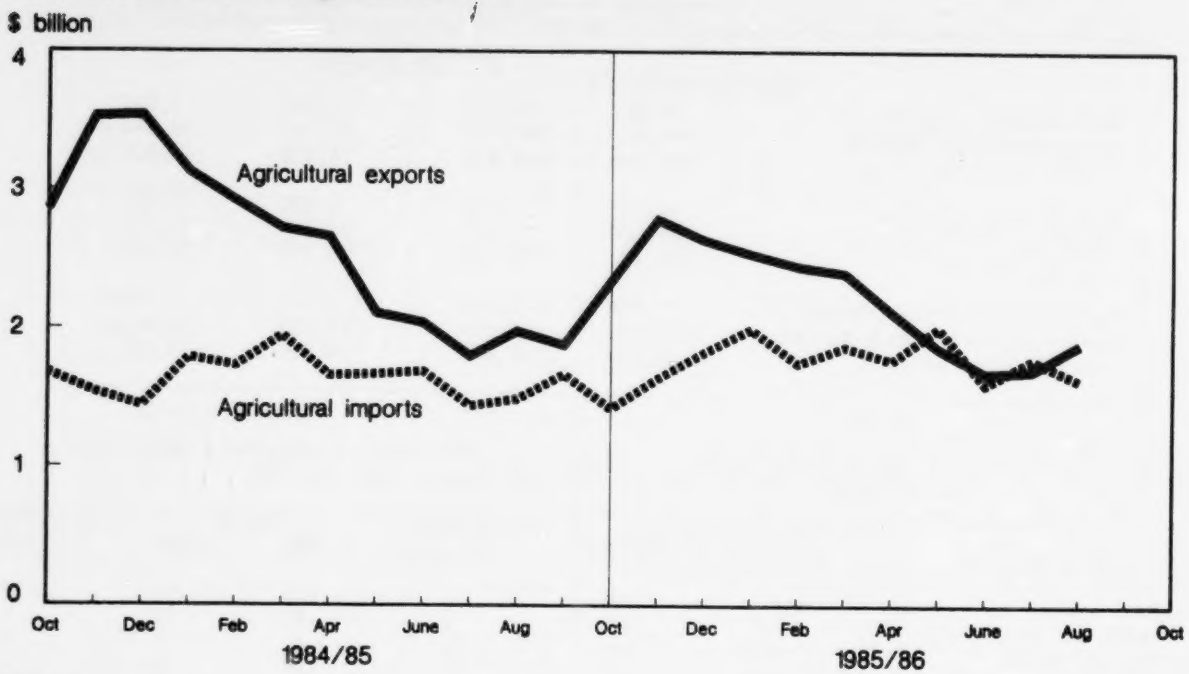
U.S. cotton exports in FY 1986 dropped well below year-earlier levels but rose twelvefold between July and August. As importers awaited lower U.S. cotton prices and competitors discounted their exports to work off stocks, U.S. cotton exports fell more than $1.3 billion in FY 1986 to $600 million. However, no single customer reduced its U.S. purchases particularly more than the rest. Cotton's EUV actually rose, despite the weaker demand and prices, as shipments of higher quality cotton continued. U.S. cotton shipments to Japan fell from 295,000 tons to 127,000 tons; to Other East Asia, from 386,000 tons to 103,000 tons; and to Western Europe, from 263,000 tons to 84,000 tons.

When the new cotton crop year began on August 1 and new programs under the 1985 Food Security Act were implemented to reduce cotton prices, cotton exports soared from 5,000 tons in July to 62,000 tons in August. Lower prices enhanced U.S. competitiveness and removed the incentive for importers to delay purchases.

Cotton Illustrates Differences Expected in FY 1987

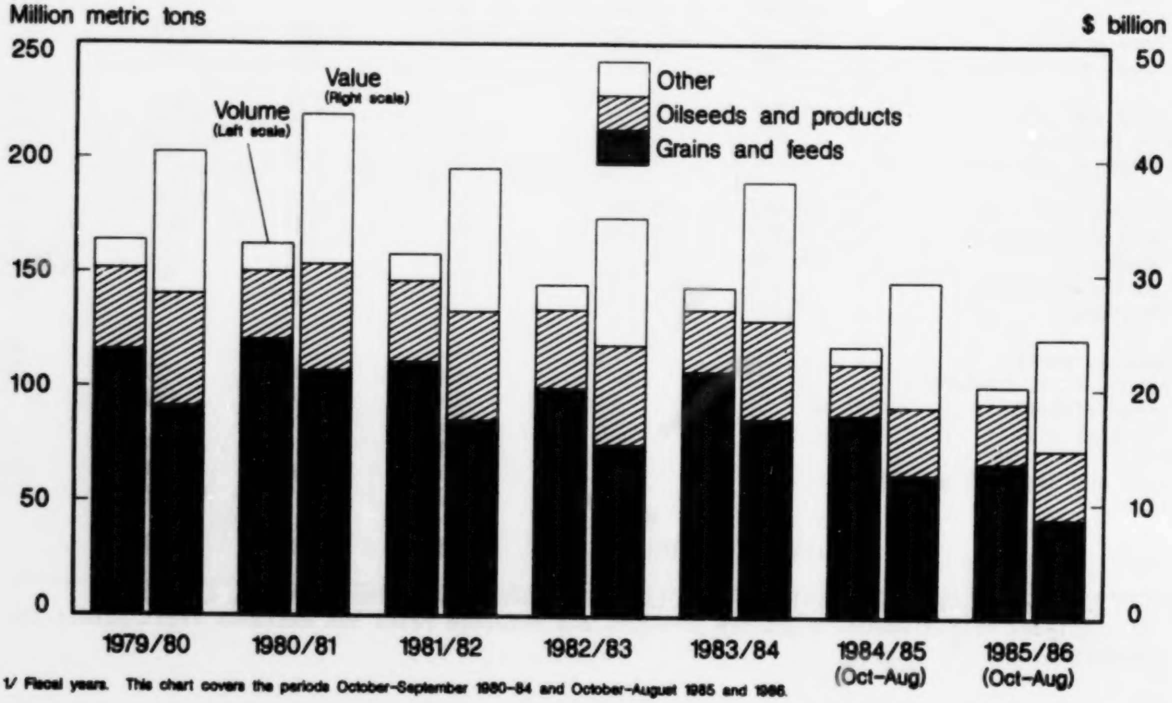
Although total export volume is not expected to rise twelvefold in FY 1987 as cotton exports did in August, U.S. agricultural trade is expected to improve due to the lagged effects of the 1985 Food Security Act. (Stephen MacDonald, International Economic Indicators Branch)

Monthly U.S. Agricultural Trade Values, October 1985-August 1986



Fiscal years.

Volume and Value of U.S. Agricultural Exports[1]



[1] Fiscal years. This chart covers the periods October-September 1980-84 and October-August 1985 and 1986.

U.S. Agricultural Imports Climb

Higher world coffee prices, unfavorable U.S. weather, and strong U.S. demand boosted U.S. agricultural imports to $19.3 billion during October 1985-August 1986, $1.2 billion (7 percent) above values in the same 11 months of fiscal year (FY) 1985. Values are expected to drop slightly toward the end of the year due to sluggish trade for some major items (especially beef, sugar, and orange juice) and substantially increased U.S. crop production.

After drought reduced the Brazilian coffee crop, higher coffee prices contributed heavily to the increased value of U.S. agricultural imports. While competitive imports during the 11-month period of FY 1986 totaled $12.1 billion, up less than 2 percent from those of the same period in FY 1985, noncompetitive items rose 16 percent to $7.2 billion.

U.S. farm product imports from developing countries, accounting for 59 percent of U.S. agricultural imports, totaled $11.3 billion compared with $7.5 billion from developed countries. Mexico replaced Brazil as the leading U.S. supplier during the 11-month period. Imports from Mexico gained 53 percent to $1.9 billion, primarily because of higher values for vegetables, coffee, and live cattle. Imports from Brazil slipped to third place, declining 20 percent to $1.8 billion because of lower values for orange juice and coffee. Imports from Canada, the second largest source of agricultural imports during this period, increased 3 percent because of larger shipments of pork, grains, feeds, and malt beverages. The market shares of the European Community (EC), Colombia, Australia, Ecuador, and Guatemala also gained.

Noncompetitive Values Up Sharply

Noncompetitive imports, accounting for 37 percent of U.S. agricultural imports, moved up 16 percent in October 1985-August 1986 from those of the same period in 1985 to $7.2 billion. Increased values for coffee, spices, and essential oils more than offset declines for cocoa, natural rubber, and tea.

Higher prices in the 11-month period boosted coffee imports, accounting for 56 percent of noncompetitive products, to a record high of $4 billion, 38 percent above year-earlier levels. Import volume increased 10 percent to 1.1 million tons. Coffee import unit prices, rising steadily since January, reached an average of $1.63 a pound during the 11-month period, about 25 percent higher than the year-earlier price. Average monthly U.S. wholesale prices for Brazilian coffee advanced from $1.37 a pound in October 1985 to $1.85 a pound in August 1986. The United States traditionally imports coffee from more than 30 countries, but during the 11-month period, 10 major countries (Brazil, Colombia, Mexico, Guatemala, El Salvador, Indonesia, Ecuador, the Ivory Coast, Uganda, and Peru) supplied nearly 78 percent of the U.S. total. All major suppliers, except Brazil and the Ivory Coast, increased their exports to the United States.

Because of adequate U.S. inventories, imports of cocoa and products fell to $1.1 billion during the 11-month period of 1986, a 7-percent drop from year-earlier levels. Volume dropped to 469,000 tons as import unit prices rose slightly to $1.07 a pound. However, imports of chocolate liquor, cocoa butter, and sweetened chocolate gained. The New York cocoa futures price averaged $1.03 a pound in

October 1985, but increased world supplies reduced prices to 89 cents a pound in August 1986.

U.S. natural rubber imports during the first 11 months dropped more than a tenth to $564 million, due mainly to lower prices. The volume remained unchanged at 736,000 tons, with unit import prices declining to $766 a ton. Over half of the U.S. rubber imports came from Indonesia, with nearly all of the remainder from Malaysia, Thailand, Liberia, and Singapore.

U.S. banana imports in the October-August period remained essentially unchanged from the year-earlier level of $682 million and 2.8 million tons. Ecuador, Costa Rica, Colombia, and Honduras provided about four-fifths of U.S. banana imports. Among other major noncompetitive imports, spices gained 52 percent to $327 million due mainly to sharply higher black pepper prices.

Competitive Import Values Up Marginally

Competitive imports totaled $12.1 billion during the 11-month period of FY 1986, up nearly 2 percent from the same period in FY 1985. Gains in live cattle, grains, tobacco, fresh fruits, vegetables, cashew nuts, palm oil, cut flowers, wine, and malt beverages fully offset declines for sugar, orange juice, coconut oil, live hogs, and palm kernel oil.

Beef import values in the 11-month period declined 3 percent to $1.1 billion from year-earlier levels, as import unit prices slipped 7 percent, while volume gained 3 percent to 628,000 tons. Australia supplied nearly 43 percent of U.S. beef import volume, with New Zealand, Canada, and Argentina shipping most of the remainder. Higher prices pushed pork import values up 4 percent to $812 million during the 11 months. Pork import unit prices increased 8 percent, but quantity imported declined 4 percent. Canada, the largest U.S. pork supplier, increased its exports 26,000 tons, or 16 percent, while those from Denmark, the second largest pork supplier, declined 34,000 tons, or 25 percent. The Canadian dollar slipped during the 11-month period of FY 1986 relative to the U.S. dollar, making Canadian pork cheaper in U.S. currency. The Danish krone strengthened, thus causing the price of Danish pork to rise in U.S. dollars. However, the EC recently increased pork export subsidies, possibly moderating the decline in pork exports.

Cheese, accounting for 49 percent of U.S. dairy product imports during the 11-month period, rose 7 percent over year-earlier levels to $351 million, with gains from Western Europe and New Zealand. Casein imports from New Zealand declined, while those from Ireland increased.

Increased shipments from Mexico pushed up total dutiable cattle entries during October 1985-August 1986 to 1.2 million head ($373 million) from 544,000 head ($234 million) in the same period of FY 1985. Canada, however, shipped 272,000 head to U.S. markets compared with 350,000 head during the same months in 1985. Live hogs from Canada totaled 519,000 head, down 63 percent from a year earlier. Hog shipments to U.S. processing plants recently fell because of larger supplies of relatively lower priced competing meats, particularly poultry and beef, and the imposition of countervailing duties in summer 1985.

Imports of vegetables and preparations gained 17 percent in value during the 11-month period of FY 1986 to $1.5 billion, mainly because of increased imports from Mexico. Volume increased 4 percent to 2.1 million tons as import unit prices rose 13 percent. Tomatoes, cucumbers, onions, peppers, squash, and eggplant are the major vegetables imported from Mexico. Higher prices boosted the value of fresh Mexican vegetables to $606 million compared with $465 million a year earlier. Due to lower prices, import values of canned mushrooms declined nearly 2 percent to $114 million, while volume expanded 22 percent to 66,000 tons. Taiwan, China, and Hong Kong, the leading canned mushroom suppliers, provided 85 percent of import volume.

The value of sugar imports during the 11-month period fell 26 percent to $611 million, while volume dropped 17 percent to 1.8 million tons. Import unit prices declined, averaging about $347 a ton, compared with $391 a ton in this same period in 1985. Increased use of corn sweetener substitutes by the beverage industry and lower import quotas reduced sugar imports. The Dominican Republic, the leading sugar supplier, provided 13 percent of U.S. import volume. Import volume also declined from Argentina, Australia, and Guatemala.

Oilseed and product values declined 17 percent during the 11 months to $603 million, due mainly to lower prices for coconut, palm and palm kernel oils. The value of coconut oil imports, accounting for 39 percent of U.S. vegetable oil imports, fell 27 percent to $202 million. Coconut oil volume, however, rose sharply to 513,000 tons compared with 360,000 tons during the same 11-month period of FY 1985. Total oilseed and product volume jumped to 1.4 million tons, chiefly because of lower prices. Import unit prices for vegetable oils averaged $480 a ton compared with $800 a ton a year earlier. The Philippines and Malaysia supplied most of the imported vegetable oils.

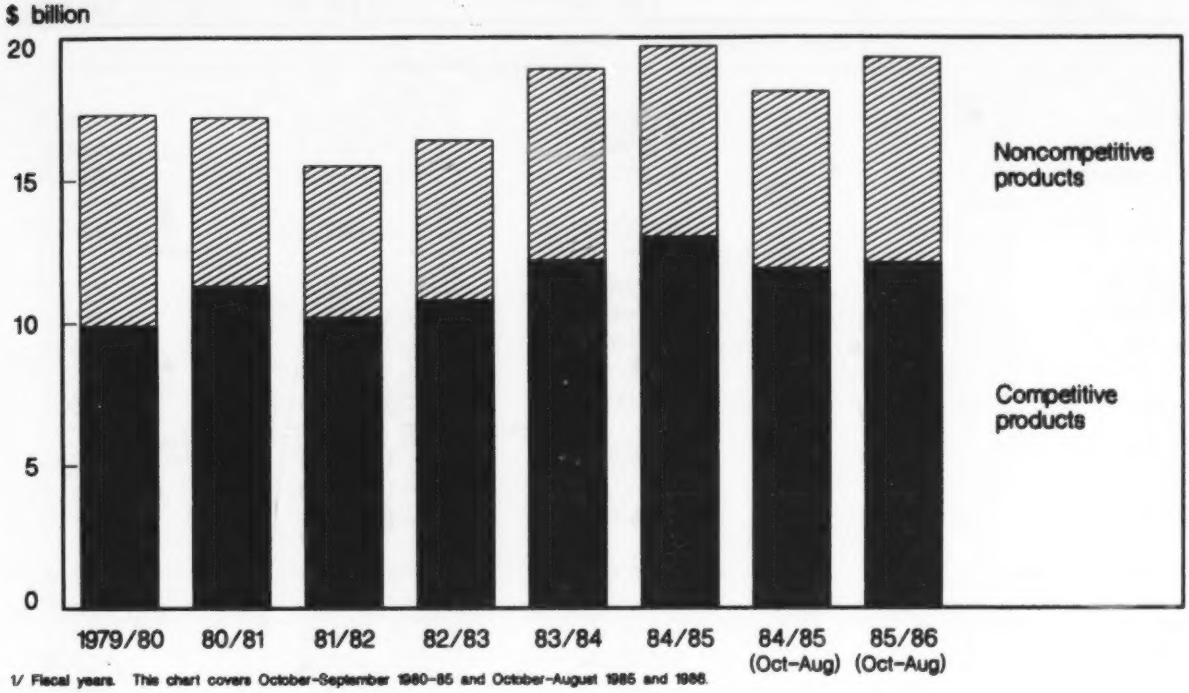
Smaller orange juice imports during the first 11 months reduced imports of fruits and preparations 12 percent to $1.5 billion. Orange juice import volume declined 21 percent below year-earlier levels to 468 million gallons, and value dropped 46 percent to $396 million because of larger domestic orange supplies. Orange juice import unit prices were 31 percent lower in the 11-month period of FY 1986 than in the same period of 1985. Imports of fresh apples from Canada and Chile, melons from Mexico, and canned pineapples from Thailand gained.

Grain and feed imports in the 11 months of FY 1986 gained 14 percent to $615 million, mainly because of larger bakery product purchases at higher prices. Biscuit, wafer, and cookie entries rose from 93,000 tons a year earlier to 115,000 tons in the 11-month period of FY 1986. Value climbed 29 percent to $220 million, mostly from the EC and Canada.

A sharp rise in imports of filler leaf tobacco during the 11-month period, mainly from Turkey, Brazil, and Greece, pushed up unmanufactured tobacco imports. Tobacco imports increased 8 percent to 190,000 tons valued at $554 million. Filler leaf imports rose from 140,000 tons to 155,000 tons in this same period of 1986. Value increased 10 percent to $507 million, with import unit prices remaining stable at about $1.49 a pound.

Because of higher prices and continued strong demand, wine and malt beverage imports during the 11-month period of FY 1986 totaled $1.6 billion, up 14 percent from those of a year earlier. However, wine volume declined 14 percent. France, Italy, and West Germany are the major suppliers of wine, with The Netherlands, Canada, and West Germany providing most of the malt beverages. Values also increased for other competitive imports, such as fresh cut flowers, seeds, olive oil, cashew nuts, and wool. (Charles E. Goode, International Economic Indicators Branch)

U.S. Agricultural Import Value[1]



---

[1] Fiscal years. This chart covers October-September 1980-85 and October-August 1985 and 1986.

Table 10—U.S. agricultural imports: Value by months, October 1983 - August 1986

Month	1983/84	1984/85	1985/86
	Million dollars

U.S. Interest Rates and Dollar Ease

The dollar eased against major currencies as U.S. interest rates declined in August. The Federal Reserve lowered the U.S. discount rate to 5.5 percent on August 20 to bolster lagging U.S. economic growth. However, major central banks in Japan and Germany did not make similar reductions and caused U.S. interest rates to slide below foreign ones and the dollar to decline slightly.

The dollar remained fairly steady, near 153-155 Japanese yen in July and August, as widespread anticipation of the cut in the U.S. discount rate and light summer trading prevented major weakening of the dollar. The German mark strengthened close to 2 marks per dollar as stronger second-quarter growth surpassed a sluggish first quarter. The French franc strengthened along with the mark to near 6.8 francs per dollar.

Discord among oil producers of the Organization of Petroleum Exporting Countries (OPEC) weakened the outlook for world energy prices, influencing the British pound and Canadian dollar. The pound weakened by mid-August to $1.49 per pound and the Canadian dollar to Can$1.39 per U.S. dollar. The Australian dollar fell severely, reaching Aus$1.58 per U.S. dollar, as traders reacted skeptically to the recent government budget and its ability to correct the Australian trade deficit and external debt. Argentina entered a second stage in its economic reform, removing price controls set in June 1985 and slowly depreciating the new, previously fixed currency, which reached 0.963 australes per U.S. dollar by mid-September.

Sluggish U.S. growth in the second quarter increased U.S. calls for increased economic stimulus from abroad, notably from Japan and Germany. U.S. officials believe increased demand from abroad will help reduce the U.S. trade deficit. Japanese and German officials are reluctant to lower interest rates further below their historically low discount rates of 3.5 percent for fear of triggering inflationary pressures. Attempts to reduce Japanese and German fiscal deficits have prevented economic growth fostered through fiscal spending, although a rapidly slowing Japanese economy due to appreciation of the yen may alter official perspective on this policy. (Edward C. Wilson, International Aggregate Analysis Branch)

U.S. Trade Benefits Economy

Agricultural exports are vital to the economic health of U.S. farmers, many U.S. industries, and the Nation as a whole. Production from more than a third of our cropland moves into export channels. The United States exported an estimated 38 percent of its wheat, 31 percent of its soybeans, over 14 percent of its corn, and 15 percent of its cotton in fiscal year (FY) 1986 (October 1985-September 1986).

Farm product exports generate employment, income, and purchasing power in both the farm and nonfarm sectors. For example, farmers' purchases of fuel, fertilizer, and other inputs to produce commodities for export necessitate additional economic activity in the manufacturing, trade, and transportation sectors. The input-output (I/O) model was used to measure this economic activity in terms of income, employment, and output.1/

U.S. agricultural exports peaked in calendar year 1981 at $43.3 billion after years of steady growth, only to decline by a third by 1985. Bulk and processed agricultural exports at 1981 levels provided employment for 1.2 million workers, one and a half times the level supported by the 1985 agricultural exports. Exports in 1981 generated slightly over $100 billion worth of business activity, $43.3 for exports and $63 billion for supporting activities. Net exports in 1981 contributed $27 billion to the U.S. trade balance compared with $9 billion in 1985.

Exports Generate Added Business Activity

The United States exported $29 billion worth of agricultural products in 1985. The value of exported raw products was $14.7 billion; processed commodities, $9.7 billion; and transportation and trade services for raw and processed products, $4.6 billion.

Business activity of an estimated $72.5 billion was required to produce the exported commodities and supporting goods and services. Thus, each dollar received from agricultural exports stimulated another $1.50 of output in the U.S. economy, a multiplier effect of more than 2.

Therefore, supporting activity required to produce the agricultural goods and services exported in 1985 generated an additional $43.5 billion worth of output: $6.8 billion from the farm sector, $3.2 billion from the food processing sector, $14.9 billion from other manufacturing sectors, $5.1 billion from trade and transportation, and $13.2 billion from other services. Around 84 percent of the additional economic activity accrued to nonfarm sectors of the economy.

1/ For a detailed explanation of the input-output model, see Schluter, Gerald, Chinkook Lee, and William Edmondson, "Income and Employment Generation in the Food and Fiber System," Agribusiness, Vol. 2, No. 2 (1986), 143-58.

Jobs For 830,000 Workers

An estimated 830,000 full-time civilian jobs were related to U.S. agricultural exports in 1985. Of this total, more than 350,000 U.S. farmworkers, 11 percent of the farm labor force, were employed in the production of export commodities.

In addition, 480,000 jobs in the nonfarm sector were directly or indirectly related to the assembling, processing, and distributing of agricultural products for export. About 50,000 of these were in food processing, 180,000 in trade and transportation, 90,000 in other manufacturing sectors, and 160,000 in other services.

Bulk Exports Dominate

Bulk agricultural exports (grains, oilseeds, and cotton) accounted for $15.2 billion, or over 52 percent, of the $29 billion in agricultural exports in 1985. Bulk exports, however, have a smaller proportional effect on the nonfarm economy. The $15.2 billion of direct bulk exports generated an additional $26.2 billion of business activity ($1.14 additional output per dollar of bulk exports versus the $1.50 for all agricultural exports). And, this additional activity was distributed differently across economic sectors (farming, 5 percent; manufacturing, 44 percent; other services, 40 percent; and wholesale trade and transportation, 11 percent) than the business activity for all agricultural exports (farming, 16 percent; manufacturing, 42 percent; other services, 30 percent; and wholesale trade and transportation, 12 percent). Of the 830,000 jobs related to U.S. agricultural exports, 383,000, or 46 percent, were jobs supporting bulk exports.

Agricultural Exports Bolster U.S. Trade Balance

Agriculture's contribution to the U.S. trade balance increased substantially during the 1970's. Net U.S. agricultural exports (exports minus imports) rose from about $1 billion in 1969 to nearly $27 billion in 1981. Net agricultural exports partly offset a $146-billion deficit in nonfarm trade in 1985, leaving the U.S. trade balance in deficit by $137 billion.

The Impact of Agricultural Imports on U.S. Output

The United States imported about $20 billion worth of agricultural commodities in 1985. Some $6.9 billion of this total was spent on complementary items (such as bananas, coffee, and tea) that did not compete directly with U.S. agriculture. The rest, $13.1 billion, was spent on competitive imports (such as meat, dairy products, fruits, nuts, vegetables, sugar, and wines) that did compete with U.S. products.

Complementary imports have been growing at an annual rate of about 7.5 percent since 1970, while competitive imports have been growing at a rate of about 8.3 percent. Only competitive imports were included in the input-output analysis of the effects of imports on the economy.

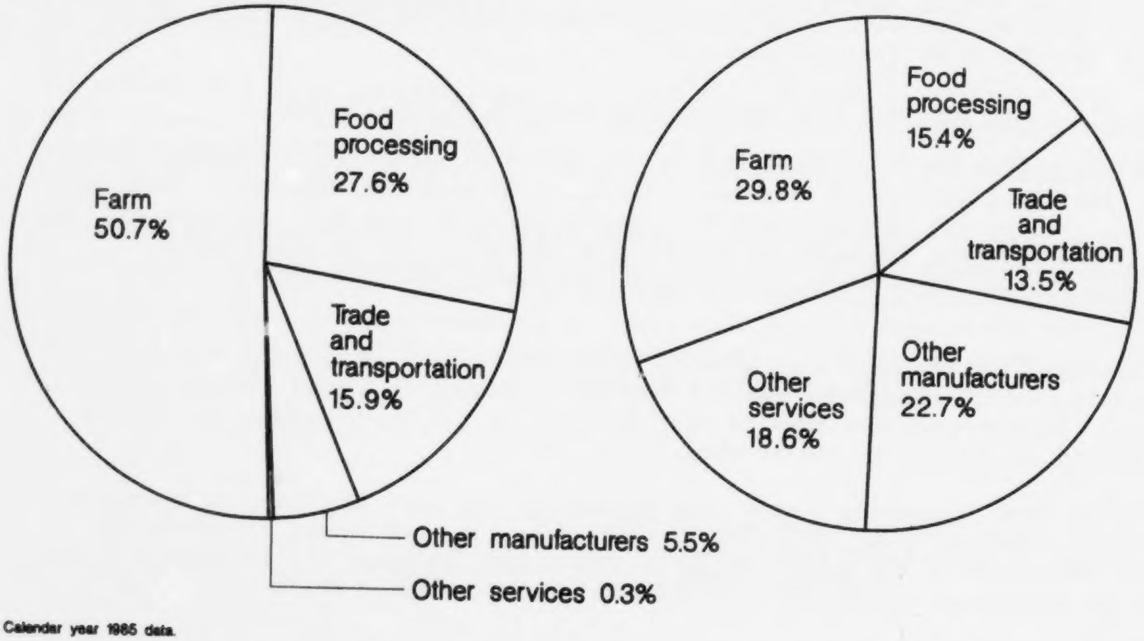
Within the food processing sector, the subsectors for meat products, beverages and flavoring, sugar refining, and food freezing, canning, and drying accounted for around two-thirds of the import value in 1985. But, although the producer's value (value at processing plant) of exported meat products offset the $2.2 billion producer's value of imported meat products, the United States imported over $0.9 billion worth of sugar and exported none, and imported $1.7 billion worth of frozen, canned, and dried goods and exported $0.8 billion worth.

Using the input-output model, the equivalent domestic effect of the $13.1 billion worth of competitive imports in 1985 is estimated at around $34 billion. That is, for each dollar spent on imports, roughly another $1.62 in supporting goods and services would have been needed if those imported items had been produced domestically, an output multiplier of about 2.62.

The multiplier effect of U.S. agricultural imports is larger than that for U.S. exports because of the relatively greater amount of processed or partly processed foods in the import product mix.

Agricultural Trade Benefits U.S. Economy

The direct balance of U.S. agricultural trade in 1985 was around $9 billion: $29 billion in exports minus $13.1 billion in competitive imports and $6.9 of complementary agricultural imports. However, the additional business activity needed to produce the supporting goods and services for exports and the output lost by importing competitive farm products reveals a different picture. The 1985 net trade surplus for agriculture was an estimated $31.3 billion: $75.2 billion of total output generated by farm exports minus $41.2 billion (including complementary imports) of agricultural imports.



While Direct Effects of Agricultural Exports Favor the Farm Sector...

...The Total Business Activity Is Widely Shared

Calendar year 1985 data.

U.S. agricultural trade positively affects most sectors of the economy. The farm sector's $21.6 billion worth of output associated with agricultural exports more than offset the $7.5 billion of farm output implicitly lost because of competitive agricultural imports.

The U.S. economy outside of farming and food processing directly accrued a net benefit of $3.6 billion from agricultural trade and a net increase in output of $24.9 billion after considering the domestic output foregone from competitive agricultural imports.

The food processing sector is the sole exception to this pattern of large net benefits from agricultural trade. In 1985, the food processing industry imported as much as it exported in direct trade and gained $0.3 billion in total output. But, the industry lost about 6,000 jobs and $0.6 billion in income.

Agricultural trade benefited the processing of meat, grain, fats and oils, and miscellaneous foods. Agricultural trade did not benefit dairy plants; sugar mills; canners, freezers, and dehydrators; beverage and flavoring makers; and confectioners and bakers.

Farm Sector Receives Much of Income Benefit

Some of the business activity stimulated by foreign trade includes inputs purchased from other sectors. Although $1 of agricultural exports in 1985 generated nearly $2.50 in total (direct and supporting) economic activity, $1 represented income to wage earners, profits, and taxes. 2/ Thus, the $29 billion of agricultural exports in 1985 generated $72.5 billion of total economic activity but only $29 billion worth of income in the form of wages, profits, and taxes. The distribution of these income effects showed a different pattern for exports and imports.

The share of total income attributed to agricultural exports and competitive imports going to the nonfarm and nonfood processing part of the economy in 1985 was similar, nearly two-thirds in each case. The distribution of the remainder within the farm and food processing sectors differed markedly. The farm sector received 29 percent of the total income stream from agricultural exports, while the food processing sector received 7 percent, reflecting the importance of raw agricultural commodities in the export bill of goods.

The total income effect of competitive imports (a lower level than exports) was more evenly divided between the farm and food processing sectors, with each getting about a fifth, reflecting the relatively greater importance of processed food products in the competitive import bill of goods. (William Edmondson and Gerald Schluter, Agriculture and Rural Economics Division, National Economy and History Branch).

2/ This is the income directly associated with agricultural trade. With this additional income earned from exports, U.S. farmers can purchase more household appliances, farm equipment, building supplies, and other capital and consumer goods. Hence, more purchasing power is spread throughout the total economy. In addition, the heightened activity, trade, and transportation stimulated by agricultural exports can boost investment in plants and equipment. Because input-output analysis does not count this additional income, our estimates of the economywide influences of agricultural trade are conservative.
